

# Novel coronavirus pneumonia Detection

DLAB We Enable Your Research

[www.dlabsci.com](http://www.dlabsci.com)

# Novel coronavirus (COVID-19)

- Coronaviruses are a group of pathogens that cause respiratory and intestinal diseases. There are many regularly arranged protrusions on the surface. The entire virus particle is like an emperor's crown, hence the name "coronavirus".
- Coronavirus is a single-strand RNA virus. The nucleic acid sequence information is sequenced at the first time, providing a basis for molecular detection and making it possible to quickly identify pathogens.

# Detection method

RT-qPCR

Serological test

High-throughput  
sequencing

Others

# RT-QPCR

Widely used detection methods.

# Detection process

## Sample collection

- Nasopharyngeal swabs / oropharyngeal swabs / blood / respiratory samples, etc.

## Pre-processing

- Inactivation

## Nucleic acid extraction

- Manual extraction
- Automatic nucleic acid extraction instrument

## Nucleic acid amplification

- RT-qPCR
- TaqMan probe type

## Result analysis

- Negative or positive based on CT value

# Pre-processing

- Inactivation at 56 °C for 30 ~ 45 min.
  - The coronavirus will lose its ability to infect people
- Mixing with vortex mixer before nucleic acid extraction.

HB120-S

- High capacity
- 16 types of optional blocks are available
- Bead/water bath

HB105-S1/S2

- Single and double block configurations are provided
  - External temperature sensor PT1000
  - Bead/water bath
- No more concern of tube sizes

H100-Pro

- Customizable program with up to 6 sequential steps;
- Temperature calibration function by user;
- Heating time: room temp.-100°: 10-15min
- Mount the heating block by magnet without any tools

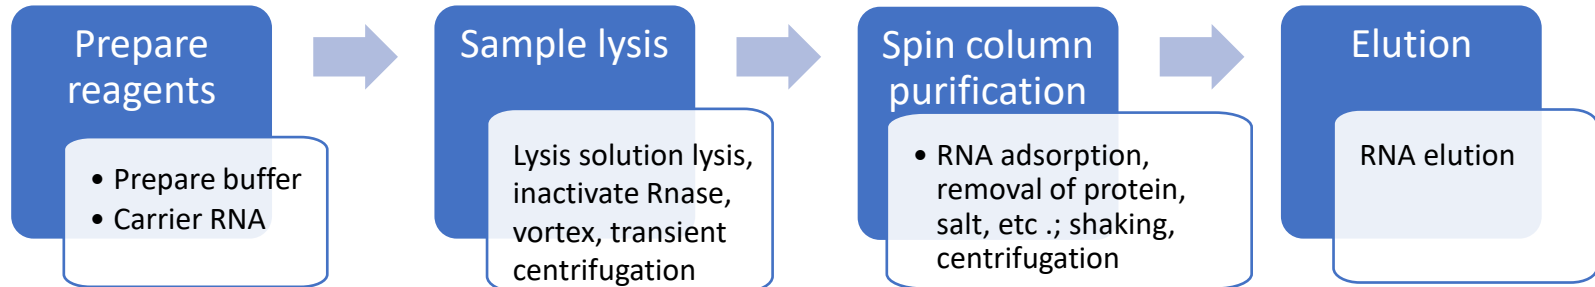

MX-S/F

- Touch+continuous working modes
- Robust aluminum-cast construction

# RNA extraction

- Manual extraction-viral RNA extraction kit (spin column)

MicroPette Plus

Levo Plus  
Pipette Filler

- 121° fully autoclavable
- Individual calibration certificate according to ISO8655
- Online calibration

- Powerful pump fills a 25ml pipette in < 5s
- Suitable for 0.1-100ml pipettors
- High capacity Li-ion battery for over 7 hours working, by 2-3 hours charging time

MX-F/S  
Vortex Mixer

- Touch+ continuous working modes
- Robust aluminum-cast construction

D1008  
Palm Centrifuge

- Instant centrifugation to eliminate air bubbles
- Safe, durable and robust rotor with clamp locking design.
- PCR eight-row tube-

D2012Plus  
High Speed  
Micro-  
Centrifuges

- Max. Speed : 15,000 rpm
- Available use inside cabinet.
- Short-time run function.

D1524R  
High Speed  
Refrigerated  
Centrifuge

- Temp. range -20°C to 40°C
- Automatic proximity locking mechanism
- Close & Lock the chamber with single hand
- Powerful compressor;
- Eco-friendly

# Nucleic acid amplification

## Novel coronavirus nucleic acid detection kit (RT-qPCR)

- Reagent configuration

dPette+  
Electronic Micropipette

- Accurate & precise motor control
- Light weight
- Easy Operation
- Pipetting, Mixing, Stepper and Dilution
- Self calibration

MicroPette Plus  
12-Channel Pipette

- Improve efficiency for higher throughput
- Direct autoclavable as one piece
- Light weight 154g

MX-F/S  
Vortex Mixer

- Touch + continuous working modes
- Robust aluminum-cast construction

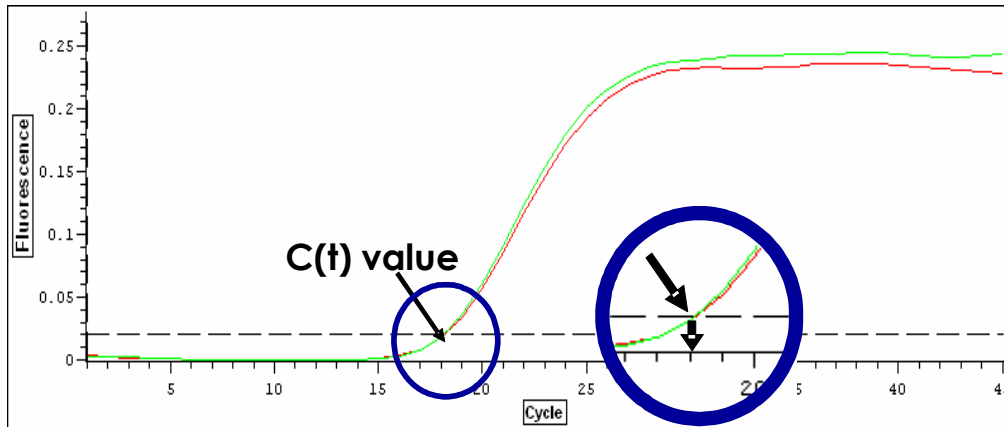

D1008  
Palm Centrifuge

- Safe, durable and robust rotor with clamp locking design.
- Instant centrifugation to eliminate air bubbles
- PCR eight-row tube-4 rows

# Nucleic acid amplification

- QPCR instrument detection: Real-Time Quantitative PCR
  - The fluorescence signal was used to detect the change of the amount of amplification products in each cycle of the PCR amplification reaction in real time.
- TaqMan probe

# Nucleic acid amplification

## Program Setting

### Reverse Transcription + PCR

## Sample Setting

- Fluorescence channel: FAM、VIC/HEX、ROX、Cy5、Cy3

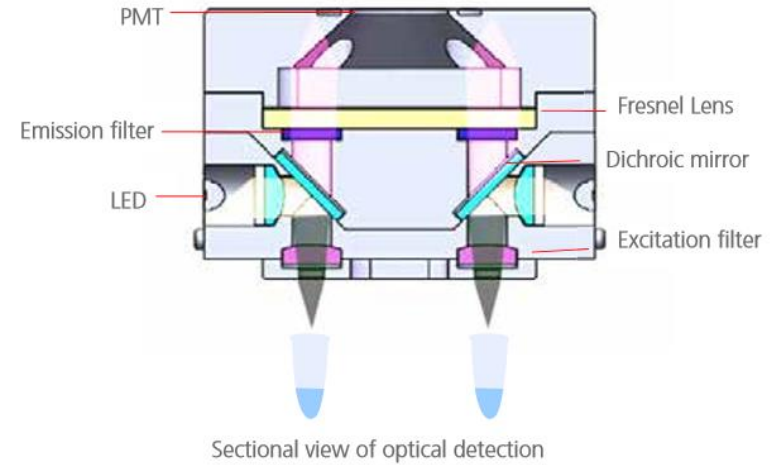

Negative-15 FAM VIC						Negative-21 FAM VIC	
Unknown-27 FAM VIC	Unknown-28 FAM VIC	Unknown-29 FAM VIC	Unknown-30 FAM VIC	Unknown-31 FAM VIC	Unknown-32 FAM VIC	Unknown-33 FAM VIC	Unknown-34 FAM VIC
Sample1	Sample2	Sample3	Sample4	Sample5	Sample6	Sample7	Sample8
		Positive-41 FAM VIC		Negative-43 FAM VIC			

One positive control

Three negative controls (randomly placed in different positions)

# Nucleic acid amplification

Accurate 96-x4/x6

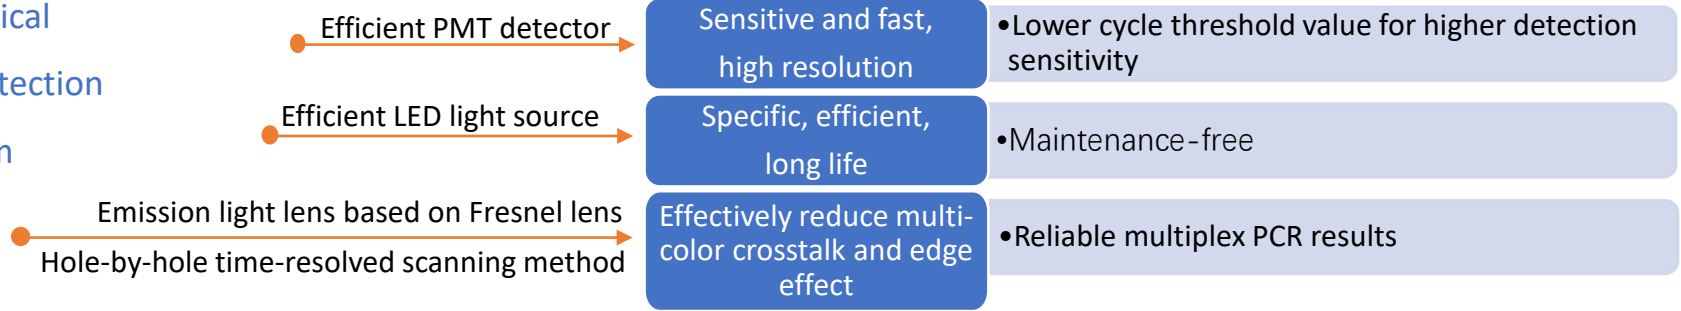

Channel 6	Channel 5	Channel 4
NED™ /Cy3/ TAMRA™	ROX™ /Texas Red®	FAM™ /SYBR
VIC® / HEX™ /TET/ JOE™	Cy5® /Quasar® 670	FAM™ /SYBR
Channel 3	Channel 2	Channel 1

# Nucleic acid amplification

## Accurate 96-x4/x6

### New optical scanning detection system

### Temperature Control System

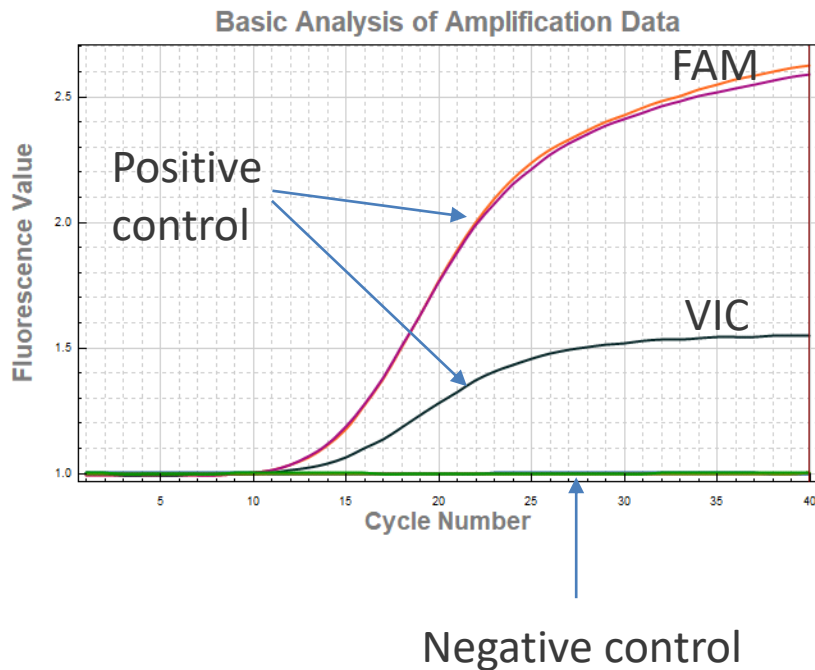

### Software

# Result analysis

- Target gene
  - ORF1ab gene、N gene、E gene .etc

## Negative :

Fluorescence channels don't display Ct or Ct value=40

## Positive :

The amplification curves are typical S-shaped, and Ct values are  $<37$

## Gray Zone :

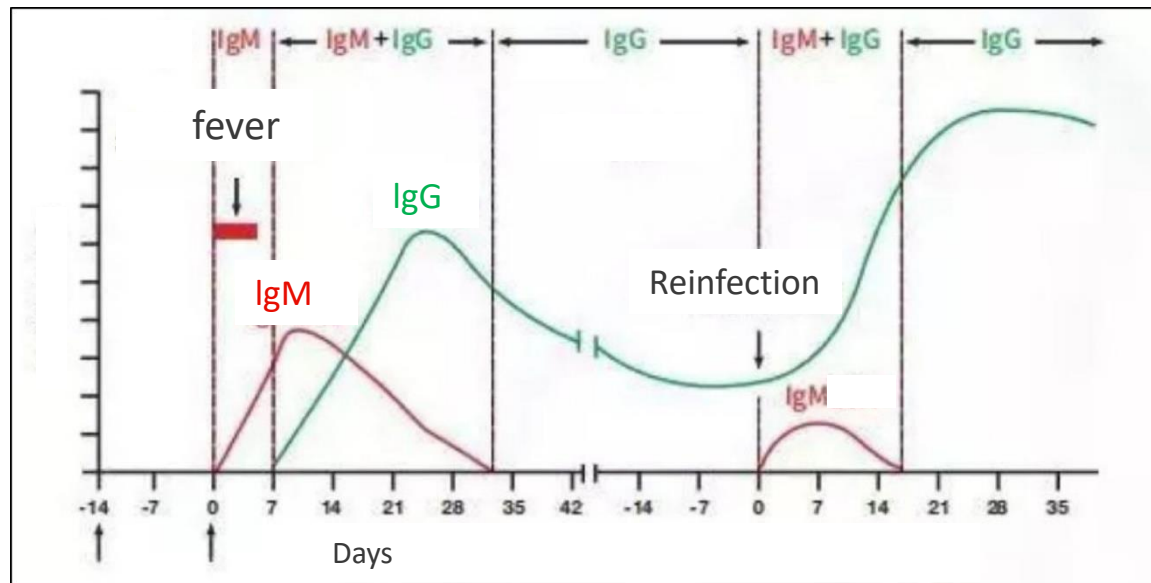

Fluorescence channel:  $37 \leq Ct < 40$ . The result is in the gray zone and need re-test. If the results are same and show typical S-shaped curves, it is judged as positive, otherwise it is negative.

## SEROLOGICAL TEST

Antibody detection and nucleic acid detection can be combined with each other, which will greatly improve the accuracy of Novel coronavirus pneumonia.

# Detection method-IgG/IgM antibody

- Antibodies are the products of a humoral immune response after the body is infected with a virus.
- IgM antibody are produced early and quickly after infection, with short maintenance time and rapid disappearance, which can be used as indicators of early infection.
- IgG antibody are produced late, last for a long time, and disappear slowly, and can be used as indicators of infection and previous infections.
- Samples: serum, plasma, venous whole blood

# Detection method

Colloidal gold  
immunochromatography

Enzyme-linked  
immunosorbent assay

Chemiluminescence  
method

## Reagent / instrument development

dPette+  
Electronic  
Micropipette

MX-T6-Pro/S  
Tube Roller

SK-R30D-E  
Long Deck  
Rocking rotators

DM0424/0408  
Low Speed  
Centrifuge

HCM100-Pro  
Thermo Mix

- Accurate & precise motor control
- Light weight
- Easy Operation
- Pipetting, Mixing, Step per and Dilution
- Self calibration

- Gentle rolling of blood sample to avoid coagulation

- Max. for 16pcs 5~10ml tubes each layer, total 32pcs, or 6pcs 50ml tubes each layer, total 12pcs

- Three customizable routine programs (Blood, Urine & Faecal )
- Low-maintenance, long-life brushless DC motor

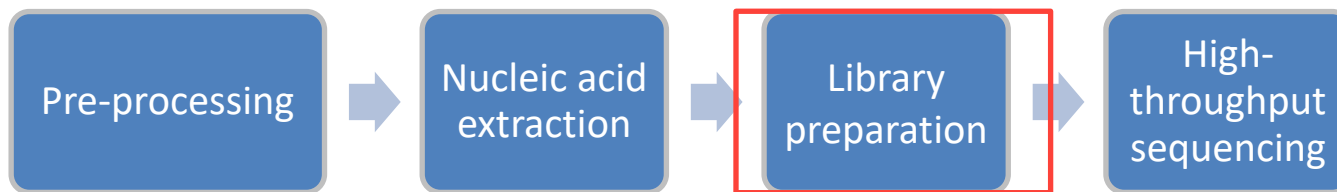

- Immunoassay incubation of antibody and antigen. With rigorous mixing function.
- Temperature calibration function
- Heating & Cooling & Mixing

# HIGH-THROUGHPUT SEQUENCING

# Detection method

- Reverse Transcription — — PCR amplification — — Fragment purification

**MicroPette Plus  
12-Channel  
Pipette**

- Improve efficiency for higher throughput
- Direct autoclavable as one piece
- Light weight 154g

**MX-F/S  
Vortex Mixer**

- Touch+continuous working modes
- Robust aluminum-cast construction

**HCM100-Pro  
Thermo Mix**

- Heating&Cooling&Mixing
- Programmable
- Temperature calibration function

**D1008  
Palm Centrifuge**

- Safe, durable and robust rotor with clamp locking design.
- Instant centrifugation to eliminate air bubbles
- PCR eight-row tube-4 rows

**TC1000-G/S  
PCR Thermo Cycler**

- High performance long life Peltier
- Auxiliary heating mechanism diminishes the edge effect
- Touchdown PCR, Long PCR
- Free touch screen pen

**GelSMART  
Image Box**

- With epi-blue Easy acquisition of DNA gel electrophoresis images.
- Coomassie blue stained SDS-PAGE and colony dishes can be observed with the white light plate mounted.

# Laboratory Safety

## SAFEVAC Vacuum Aspiration System

- SafeVac is designed for laboratory waste recovery and separation of liquid and solid. It is widely used in cell culture, DNA extraction, microplate handling, and many other liquid separation or recovery applications.
- It is suitable for cell culture dish, microplate, flask, tube, etc.

- Default 8 adapters +adapter bracket

Excellence in Manufacturing to Serve Science
